personal statement

My love for creating richer experiences for the community at large drove me to pursue a Masters in Interaction Design from my undergrad education in Architecture. I like dealing with diverse issues in our society and my User Centered Design approach has taken me from exploring tangible interactions to designing Augmented and Virtual Reality environments. I am very research driven and like most designers, find great satisfaction every time I prototype my sketches.

I believe Interaction Design is an ever evolving field and will continue to change its approaches and patterns for many more years to come. This has created this zeal within me to stay hungry for more while staying foolish at the same time.
